

Introducing Vat Monitor

The Farmtrenz Vat Monitor is your electronic friend watching over your precious milk 24/7.

Vat Monitor utilises multiple sensors:

- ▶ Milk temperature in the vat
- ▶ Milk temperature at cooler inlet
- ▶ Milk temperature at cooler outlet
- ▶ Wash tank temperature
- ▶ Wash temperature in the vat
- ▶ Vat outlet tap closed or open
- ▶ Vacuum pump operation

From the makers of the well-known fail-safe KIM and TIM effluent irrigation monitors comes the **Vat Monitor**.

Vat Monitor is designed with the new milk cooling regulations from the Ministry of Primary Industries in mind. Be sure your milk temperature is down to 6°C two hours after milking ends with its constant monitoring – or receive a text alarm warning you if it isn't!

View real-time and historical data on the performance of your milk refrigeration with our GUI software on the cowshed computer, also viewable over the internet. **Vat Monitor** also logs the data for dairy company compliance.

Vat Monitor available as:

- ▶ add-on module to Farmtrenz Hub system, or
- ▶ separately with Text Unit

Vat Monitor – your milk vat's best friend.
