

Say hello to

WES

Our Weather Station – WES – is your friendly electronic eye-on-the-sky, right there in the paddock.

WES can measure:

- ▶ Soil moisture
- ▶ Soil temperature
- ▶ Rainfall
- ▶ Air temperature
- ▶ Wind direction
- ▶ Wind speed
- ▶ Humidity

WES is a professionally-made, industrial-grade electronic weather station designed to work in all weather conditions.

See the weather trends happening right there on your farm. Know exactly when the best time to apply your fertiliser or effluent is so you don't damage your pasture or wash away nutrients.

Mounted to a paddock post, it's a modular system easily customisable for specific functions an individual farmer wants.

For instance, you can choose to use a tape or a probe moisture measuring device, or have two moisture tapes or probes for different soil types on the farm.

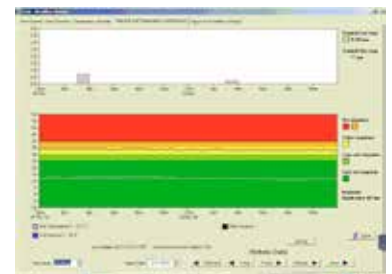

Like all Farmtrenz products, data is sent via radio telemetry and displayed and logged on an attached computer via our GUI software program. You can view real-time and historical weather data in easy-to-read graphs.

Optional:

- Aquaflex tape or Decagon probe soil moisture measuring devices.
- House Receiver Unit – view weather data from connected devices at your home.
- Text Unit – receive text alerts e.g. soil moisture capacity reached, on your cellphone.
- GUI software – view real-time and historical weather data for your farm(s). See graphic →
